

# LOOKS MAY BE DECEIVING.

## OUR POINT EXACTLY.

Introducing RockStep, a glass fiber reinforced concrete that looks like natural stone, is strong like natural stone but weighs 80 percent less than natural stone. It comes in exact sizes, too, so you can design and execute your next project without added hassle or added waste. And because it is lighter in weight, no heavy equipment or extra labor is required. Saving you both time and money .

mysticrete.com

Bob and Sam are both building an outdoor staircase. Bob uses natural stone, which weigh approximately 390 pounds each and require heavy machinery and extra crew members to move. Sam uses RockStep, a glass fiber reinforced concrete that looks like natural stone but weighs just 80 pounds, so no extra labor or machinery is required. If Bob and Sam start building at the same time, who will finish first?

**RockStep. The perfect answer for all your landscaping step designs.**
